

One Size Does Not Fit All

Combined reporting is often convoluted or requires a manual effort. Valuable data may exist in multiple systems spread throughout an organization and off-the-shelf solutions tend to have a one-size-fits-all approach which rarely aligns with individual company needs. If you were able to organize your firm's data the right way, you could obtain better client and business insights to act faster, reduce the time necessary to put results together, and improve your competitive edge.

SE Software Services

If your organization is in need of innovative solutions specific to your needs, look to [SE Software Services](#). We offer custom software development solutions. From design and specification to development and support, SE can improve your processes and increase your efficiencies while delivering an inclusive experience for your staff to yield results that work for them.

The SE Software Services team specializes in:

- **Reporting** – develop, refine or extend your reporting including building or accessing a Data Warehouse
- **Custom Applications** – develop apps to deliver new business functionality or replace legacy apps, including support for existing custom development
- **Data Integration** – leveraging information from disparate sources, including legacy and new applications
- **Audits & Remediation (SQL & SharePoint)** – assess the health, security and performance of your current environment, with actionable plans to bring it to Best Practice standards
- **Migration (SQL & SharePoint)** – assist with a move to new hardware, new versions or into cloud services (Azure/O365)
- **Staff Augmentation** – extend, fill-in or train your existing staff

Range of Skillsets

SE's team of skilled software and database developers have Microsoft certifications in SQL Server and years of experience delivering innovative solutions. Our skillsets include .Net, advanced SQL Reporting Services (SSRS), Microsoft Access, HTML5, JavaScript, O365 implementations and development, Crystal Reports, SharePoint and more.
